EPDs: Expected Progeny Differences are estimates based on the data of the individual animal and his relatives in all the different herds across the breed's population. EPD's figures are in actual pounds, plus (+) or minus (-) for each trait. Those below would be minus (-) and those above average would be plus (+). You can expect these differences in the actual weight of your bull's calves. EPDs predict the transmitting ability of each bull when compared with the many thousands of bulls in each breed.

Feed Efficiency Information three points of information on each bull.

1. ADG EPD is difference between animal actual ADG and expected ADG based on size and growth of an animal on a feed test.

2. RFI EPD is the difference between an animal's actual intake and expected intake based on size and growth of an animal on a feed test.

3. NEI (Nichols Efficiency Index) - \$ Index combining both Adg and Feed conversion for economic gain.

Nichols Health Shield: The Bulls represented with the Nichols Health Shield Emblem represent bulls that are in the Top 30% of Nichols Genetic Evaluation for resistance to Bovine Respiratory Disease. The probability (in %) of a calf not being treated for respiratory disease post weaning.

Nichols Hybrids and Composites are the result of crossing two or more pure lines in specific crosses to maximize the best traits of the grandparent lines. All Nichols lines are black and polled.

A Composite bull's heterosis (cross bred vigor) is

transmitted to his offspring. Plus, his calves are more uniform in type, performance, and carcass characteristics than back crossing purebreds.

Virtually all poultry, swine, and grain genetics are the result of systematic composite breeding.

PURE LINES

AN = PUREBRED ANGUS

—100% British

SM = PUREBRED SIMMENTALS

—100% Continental

DS = PUREBRED SOUTH DEVON

—100% British

Composites' sires and dams may be reciprocal crosses. This does not effect their breed %, performance, phenotype, quality, carcass traits, or transferable heterosis.

Feed Efficiency EPDs

SmartFeed bunk system at Nichols Farms is used to measure individual feed efficiency on bulls and heifers. As the data is gathered we have added three points of information on these Bulls.

Feed Efficiency Information three points of information on each bull.

1. ADG EPD is difference between animal actual ADG and expected ADG based on size and growth of an animal on a feed test.
2. RFI EPD is the difference between an animal's actual intake and expected intake based on size and growth of an animal on a feed test.
3. NEI (Nichols Efficiency Index) - \$ Index combining both Adg and Feed conversion for economic gain.
